Digital technologies are con-	tinually transforming	the field of education	. According to Gallup survey, 87		
percent of American public s	chool teachers use dig	ital tools every week.	Among the most significant trends		
in EdTech (educational techn	nology), augmented rea	ality (AR) takes a lead	ing position. Augmented reality is		
the idea that you're bringing	g animation or 3D ima	nges into your real wo	orld and using your device to see		
something that isn't actually	there. If you are not	familiar with this con	cept, perhaps the best example is		
Pokémon Go. Unlike VR, AR	R doesn't require any ex	xpensive hardware. Be	cause most people currently own a		
smartphone, AR technologies	s are immediately avai	lable for use for the m	najority of the target audience. AR		
can bring a number of benefits in education. It helps the students grasp abstract concepts through rich visuals					
and gain hands-on experience in low-risk virtual settings. For example, students can explore the internal					
organs of a frog easily without	ut dissecting frogs in b	oiology class. Or teach	ers can use AR to create a tornado		
right into the classroom so stu	idents can experience the	hese destructive storms	s close up. Besides, AR can replace		
textbooks, physical forms, posters, and printed brochures. This helps reduce the cost of learning materials and					
makes it easy for everyone to access. Interactive, gamified AR learning also keeps students engaged					
throughout the lesson and m	nakes learning fun and	effortless. Moreover,	every category of learners, from		
elementary school students to long-time professionals, can benefit from AR learning.					
26. AR is a technology that uses mobile devices to create real-world objects.
