Question 4: (traditionally / traditional / tradition)

II. Read the following passage carefully. Do the tasks below the passage. (8,0 pts.)

Some scientists believe the Earth is 4,6 billion years old. However, the mountains, valleys, rivers, deserts and forests we see today are much younger than that. For example, Mount Everest is about 60 million years old and the Amazon Rainforest is only 10 million years old. The youngest sea in the world is the Baltic Sea, about 15,000 years old.

The Earth is always changing because of volcanoes, earthquakes and, of course, wind and rain. Some of these changes are very slow and others are quick. Water and ice can make

very big changes to the planet. For example, glaciers can cut through mountains and make deep valleys.

It's normal for our planet to change. At the moment, some scientists think it's changing faster than usual. They don't understand everything that is happening, but they know that temperatures are rising. The weather is getting wetter in some places and drier in others, and there are more big storms. However, these changes are not bad for everyone. Because the Arctic is getting warmer, some people in Greenland now own businesses that grow and sell vegetables. That wasn't possible 50 years ago. Farmers in Greenland like the warm weather and hope it will continue.
